Soil Health and Landscape Hydration Field Day

Join us for this free field day at Murdoch University's Whitby Falls Farm, bringing together leading expertise in property water planning and soil health to explore practical solutions for improving farm productivity, resilience and natural resource management.

The workshop will include:

- Field walks
- Practical insights into landscape hydration principles and implementation
- Hands-on demonstrations and access to valuable soil health resources
- Options for improving soil health, optimising production and building climate resilience on farm
- Opportunities to discuss practical, farm-scale solutions directly with industry experts and fellow landholders

Lance Mudgway, Landscape Planner and Hydrologist with the Mulloon Institute, will explain the principles of landscape hydration, how it can be implemented on-farm, and the benefits it can deliver for farming enterprises and the wider catchment.

Mark Tupman from Productive Ecology will discuss the importance of soil health and its role in supporting productive, profitable and climate-resilient farming systems.

Thursday
3 December 2026

9am - 2.30pm
Morning tea and lunch provided

Whitby Falls Farm
1619 S Western Hwy, Whitby
